

# kMeter for kPulley Go

## Instructions

Make sure the kMeter holder has two 1.5 volt AA batteries inserted before attaching it to the kPulley Go.

Make sure the kMeter holder attaches correctly with its magnets fully in contact with the metal of the kPulley Go. In order to function, the kMeter holder must be centered on the kPulley Go.

When fully on, avoid rotating the kMeter holder as the sliding motion of the magnets can scratch the paint of the kPulley Go.
